NORDSON : Adhesive dispensing System

Nordson is the world leading producer of precision dispensing systems that apply hot melt adhesives, cold glue and coating to a broad range of consumers and industrial products during manufacturing operations, such as case sealing, bag manufacturing, siftproof, paletizing, labelling, wraparound

The **ProBlue® Liberty ATS** combines all benefits of a tankless melter with an adhesive automatic fill system with an adhesive tracking system (ATS) to track total adhesive consumption, per package add-on weight, total number of products. An integrated precision gear flow meter directly measures adhesive volume and the system output signal allows to stop the line & eject product out of tolerance. It allows to maximize uptime, optimize adhesive consumption and improve production efficiency.
