

## PRESS RELEASE

Gerhard Schubert GmbH at all4pack in Paris in Hall 6, Stand F 039

### **Preconfigured and efficient: the lightline Cartonpacker**

**Schubert presents the case packer from the new lightline product family**

***all4pack, Paris/Crailsheim, October 2018 – premiere in France: At this year's all4pack trade fair in Paris, Schubert is presenting its new lightline Cartonpacker to the French market for the first time. The case packer erects, fills and closes cartons in a very small space.***

**The preconfigured design allows customers to benefit from a short delivery time and lower procurement costs. The Cartonpacker is an element of the new Schubert lightline machine range. The company now offers three preconfigured packaging machines for standard packing tasks – designed for specific product and format variants. Along with the “lightline Cartonpacker”, these can also be used for pick-and-place applications with the “lightline Pickerline” and for packing into flow-wrap bags with the “lightline Flowpacker”.**

Not all packing tasks demand the utmost flexibility. Often the focus is on simple, standardised packing tasks. At the same time, many manufacturers value high-quality machine engineering. For packing, filling and closing cartons in a very small space, Schubert now offers the lightline Cartonpacker. The machine is available in four versions for different types of carton: trays, shelf-ready cartons, RSC cases and wrap-around cartons. The Cartonpacker is also designed for a specific product, e.g. bags, boxes, bottles or cans. Depending on the type of carton, the machine is equipped with a suitable erecting, filling and closing tool. Schubert offers flexibility within the machine version: each product type can be packed into different format variants.

### **Delivered quickly and ready for use**

At just 3.5 x 2.5 metres, the Cartonpacker scores points for its compact design. All function units – erecting, filling and closing – are put together in one

preconfigured TLM frame. Thanks to its standardisation, customers benefit not only from attractive investment costs, but also from short delivery times and accelerated entry into production. Schubert supplies the machine as a unit: assembly and commissioning within one week will also be possible in the near future. The time from receipt of the order to commissioning will amount to just two to three months. This will allow manufacturers to expand their capacity or react to new orders more quickly. The tried-and-tested functional principles of a Schubert TLM line and the intelligent machine control ensure reliable operation with a high degree of line availability for the entire service life of the machine.

### **Up to 200 boxes per minute**

At all4pack, Schubert is presenting a lightline Cartonpacker that securely places up to 200 boxes per minute into wrap-around cartons. The cartons are perforated in a way that allows them to be opened quickly and easily by retailers and used as shelf-ready displays. The machine is designed for two different carton sizes: The first format of 190 x 195 x 180 millimetres holds ten smaller boxes, which can be packed into the carton and placed one behind the other. If 14 larger boxes are required in a shelf-ready pack, the 375 x 242 x 180-millimetre carton should be used. The Cartonpacker on display fills between 11 and 19 wrap-around cartons per minute.

### **Standardisation for more customer benefits**

With the new Schubert lightline machine range, the globally recognised market leader in top-loading packaging machines continues to move the standardisation of its technology forward – with the focus firmly on the optimal solution for the different needs of its customers. “Manufacturers can now choose between preconfigured machines from the new lightline product family with defined product and packing formats, and freely configurable machines with full movement axes that are individually tailored to customer requirements. For all these machines, we guarantee the same high quality that Schubert always offers,” says Marcel Kiessling. Schubert’s packaging machines allow manufacturers of all sizes to make the switch to robot-based automation or to expand existing lines.

The new Schubert lightline machine range includes packaging machines for standard packing tasks with preconfigured system components – along with the “lightline Cartonpacker”, these can also be used in pick-and-place applications with the “lightline Pickerline” and for packing into flow-wrap bags with the “lightline Flowpacker”.

### **About Gerhard Schubert GmbH**

Gerhard Schubert GmbH is a globally recognised market leader in top-loading packaging machines (TLM). For its digital, robot-based packaging machines, the family-owned company based in Crailsheim (Baden-Württemberg, Germany) builds on an interplay of simple mechanics, intelligent control technology and high modularity. With this philosophy and a highly developed culture of innovation, the company has been pursuing an entirely independent technological path for more than 50 years.

With its TLM technology, the machine manufacturer provides its customers with future-proof packaging machine solutions that are easy to operate, flexible in terms of format conversion, high-performance and stable in function. The TLM packaging machines package products of all types and from all sectors – from food, confectionery, beverages, pharmaceuticals and cosmetics to technical products – in trays, cartons, boxes or in flow-wrap bags.

Well-known brands such as Ferrero, Nestlé, Unilever and Roche rely on Schubert’s automation solutions, as do numerous small, medium-sized and family-owned companies. Founded in 1966, the second generation of the company now employs 1,300 people.
